

Innovation and Modern Approaches in Mother Language Lessons

Karimova Muxtabar Adhamovna

Academic Lyceum of the International Islamic Academy of Uzbekistan

Head teacher of mother tongue and literature

Abstract: Methodological and pedagogical recommendations on the use of information and innovative technologies in native language classes are given in this article. It is also explained that it is possible to direct the education of students in a positive direction through mother tongue lessons.

Key words: native language and literature, innovation, technology, methodology, information, multimedia.

Nowadays, it is difficult to imagine our time without information communication tools. Information and communication technologies are steadily entering the education system as well as all other fields. In particular, it is important to introduce informational multimedia educational technologies to primary education, to fully and perfectly absorb the content of the subjects in the minds of students, to introduce them to innovative tools. In addition, the effective use of multimedia tools in primary education has its own advantages. They can be expressed as follows:

- *demonstration occupies one of the most important places in education;*
- *encourages the student to search;*
- *activates the student's thinking;*
- *creates a positive motive for student activity;*
- *there is an opportunity to conduct training in a live and communicative manner;*
- *storing the materials related to the educational content in the computer memory;*
- *students will have the opportunity to deliver at any time.*

At the same time, the spiritual education of children and students in preschool educational institutions is one of the most urgent problems, through which it is possible to achieve the formation of the spirituality of the society. Also, in the process of using information and communication tools in primary education, it is necessary to form and strengthen the ideological immunity of students. Of course, it is necessary to start these

things from the family, that is, it is necessary to start with educating the spiritual qualities of our children in the family, because the education given to them will grow and improve with them. That is why the formation and improvement of the spirituality of our children is carried out first from the family, and then step by step in the continuous education system. In addition, in primary education, the content of the subject of the mother tongue should include the sense of the Motherland, national pride, traditions and national values, as well as the culture of behavior, eating, dressing, tidiness, being polite and hardworking. it is necessary to form human qualities. It is better to provide spiritual education to students in the following three directions:

- *Positive effects on the formation of students' morale.*
- *Negative effects on the formation of students' morale and their elimination.*
- *Development of multimedia educational technologies for the formation of students' spirituality and achieving its wide use in practice.*

In addition, the multimedia method has the following educational and educational advantages in increasing the effectiveness of education:

- variety of information: text, pictures, decoration, speech, music, clips from video films, TV frames, animations can be used;
- the new level of "human-computer" interactive communication will be much wider and will receive comprehensive information from it;
- instills a creative attitude in students in learning, and this, in turn, builds confidence in them;
- activates students' thinking;
- creates a positive motivation for educational activity;
- allows self-expression; learns to pay attention to different thoughts and opinions;
- will be mentally ready to express and assimilate new opinion.

There is a big difference between today's students, their dreams and interests. Based on this, today's teacher should be aware of the news happening not only in our country, but also on a global scale, apply the necessary scientific news related to his field to his work, and not only rely on the textbook, but also teach students the scope of the subject

he should be able to understand, constantly search for himself, expand the knowledge he has. As our sages say: "*Teaching is double studying.*"

A number of responsibilities of the teaching profession can be listed. Among these are learning the child's psyche, being able to fight against negative aspects in it, being able to make students love their country, family, parents, friends while awakening interest in their subject in the hearts of their students. It is possible to include such things as studying the student's family situation and establishing cooperation with his parents. A teacher of the mother tongue and literary science should know the correct speaking, expressive reading, the ability to express one's opinion independently, oral and written speech, and the highest possible level of literacy, which is considered a must for every person in life. It serves as a bridge in acquiring the degree. This is also a form of his responsibility. The people of the teacher are such a people that they accept each student as their own child, are full of pride in their achievements, share their sufferings.

In conclusion, it can be noted that it is necessary to regularly carry out activities related to the enrichment of educational content. Many pedagogical factors can be found in the formation of students' spirituality. They can be a solid didactic basis for raising the educational content to a new level of quality, and their skillful inclusion in the educational content is a unique innovative process that requires high pedagogical skills from the teacher.
